

Data sheet

# EMP 2 Pressure transmitters

The high accuracy pressure transmitter EMP 2 is designed for monitoring and control in marine and industrial applications and offers a reliable pressure measurement, even under harsh environmental conditions.

The flexible pressure transmitter programme covers absolute or gauge (relative) versions with zero and span adjustment with a 4 – 20 mA output signal.

It has all the necessary marine approvals.

Special versions with integrated pulse-snubber available, designed for use in hydraulic applications with severe medium influences like cavitation, liquid hammer or pressure peaks.

\* For use in zone 2 explosive atmospheres.

**Features**

- For use in Zone 2 explosive atmosphere

**Approvals**

Lloyds Register of Shipping, LRS  
 Germanischer Lloyd, GL  
 Det Norske Veritas, DNV  
 Registro Italiano Navale, RINA  
 Bureau Veritas, BV

Nippon Kaiji Kyokai, NKK  
 American Bureau of Shipping, ABS  
 Korean Register of Shipping, KR  
 China Classification Society, CCS  
 Russian Maritime Register of Shipping, RMRS

**Technical data**
*Performance (EN 60770)*

Sensor temperature range	Normal	-10 – 70 °C, (Ref. Fig. 1)
	ATEX Zone 2	-10 – 85 °C
Transport / storage temperature		-50 – 70 °C
Media temperature		-40 – 100 °C, (Ref. Fig. 1)
Media		Water, fuel, oil, lubricating oil, refrigerants, ammonia, gas etc.
Voltage supply		Max. 32 V and min. 12 V d.c. between terminals N and P
Load resistance	A.	max. 410 Ω at 24 V d.c. 50% / -20%
	B.	max. 650 Ω at 24 V d.c. 50% / 0%
Zero point adjustment		- 5 – 20% range span; but max. -1–1.5 bar (kp/cm <sup>2</sup> )
Span adjustment		± 5% of range span; max. ± 5 bar (kp/cm <sup>2</sup> )
Combination of span and zero point adjustments		- 5 – 20% of range span
Noise – immunity		Complies with the standard for industrial apparatus EN 61000-6-2. The standard contains tests for the following: HF fields, mains transmitted HF, voltage transients, electrostatic immunity, supply voltage variations, low-frequency radiation and transient protection in accordance with Germanischer Lloyd
Noise – emission		Complies with standard EN 61000-6-3
Accuracy		≤ ± 2.3%
Linearity		≤ ± 0.3%
Temperature dependence	Thermal zero point shift	≤ ± 0.06 % FS / °C
	Thermal sensitivity (span) shift	≤ ± 0.06 % FS / °C
Voltage dependence		≤ ± 0.1% FS / 10 V
Vibration stability		3 – 30 Hz amplitude 1.13 mm and 30 – 300 Hz acceleration 4G according to IEC 60068-2-6. The requirements of the ship classification societies are up to 100 Hz, acceleration 4G. Extended specifications by prior arrangement
Time constant	Liquids with viscosity < 100 cSt	< 4 ms
	Air and gas in combination with pulse snubber:	< 35 ms
Shock stability		500 g for 1 ms to IEC 60068-2-27
Enclosure		IP67 Housings are made of enamelled pressure-die-cast aluminium (GD-AISI 12)
Pressure connection		G ¼, G ½ A standard, G ¾ A mano
Net weight		approx. 1 kg
Cable entry		Pg 13.5 for cable diameters 5 – 14 mm

*Explosive atmospheres*

Zone 2 applications	<b>II 3G</b> <b>Ex nA IIA T3 Gc</b> <b>-20C&lt;Ta&lt;+85C</b>	EN60079-0; EN60079-15
---------------------	---	-----------------------

When used in ATEX Zone 2 areas at temperatures <-10 °C the cable and plug must be protected against impact

*Identification*

The type designation and code number of the transmitter is embossed on the side of the housing at the bottom close to the pressure connector.

**Ordering**

(When ordering please state type and code number)

*Pressure in bar*

Operating pressure $p_e$ [bar]	Test pressure $p_e$ [bar]	Min. burst pressure $p_e$ [bar]	Code no. EMP 2

Installation conditions

Max. ambient temperature as a function of temperature

- A: Ambient temperature
- B: Temperature and medium
- C: Operating range
- D: Transport and storage temperature

Fig. 1

Mounting

Type EMP 2 is equipped with a 3 mm steel bracket for mounting.

Pressure connection

Connector with outside cylindrical thread G 1/2, some types available with G 3/8 A mano, and inside cylindrical thread G 1/4, to ISO 228.

The primary insertion length of the connector corresponds to EN 837. Connection to the transmitter is made through a connector with a spanner flat, 14 mm across flats.

When fitting or removing pressure lines, the spanner flats on the pressure connector should be used to apply counter-torque.

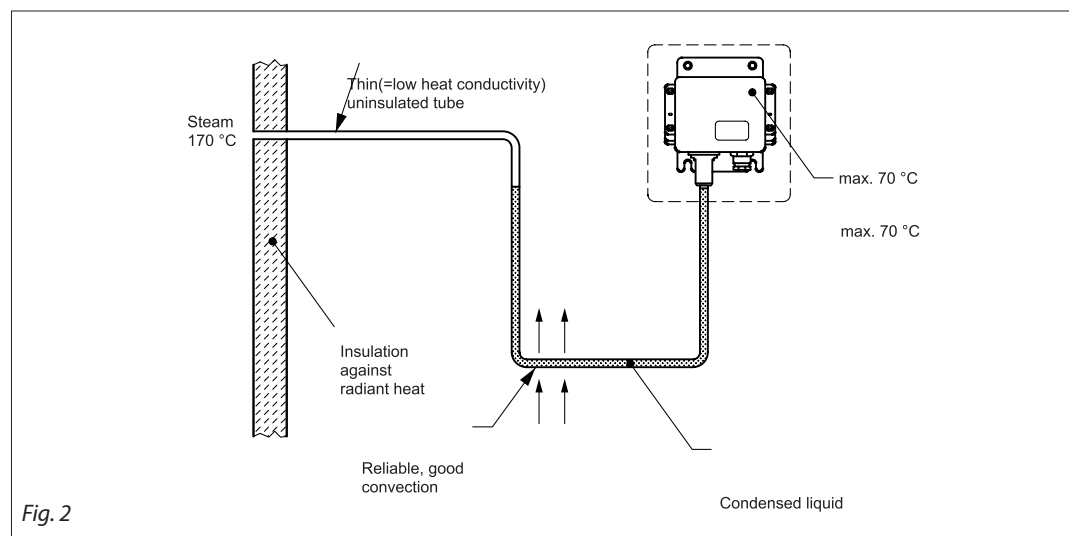

Fig. 2

Water systems

Water in the pressure element is not harmful, but in the event of frost a water-filled pressure element may burst. To prevent this the transmitter should be allowed to operate on an air cushion.

Steam plant

To protect the pressure element against temperatures in excess of the maximum temperature for the medium (100 °C), the insertion of a water-filled loop is recommended. In the example, fig. 2, insulation against radiant heat is also shown.

**Application and media conditions**

- 1: Surge damper
- 2: Pump
- 3: Valve
- 4: Tank

Fig. 3

In cases where valves are closed momentarily, surges of a value in excess of that for which the pressure element is designed can occur. To avoid damage to the pressure element, a damper should be fitted.

The device can consist of a flexible pipe, a throttle, a shock valve, or a combination of these items. The amplitude of surges should never exceed the maximum pressure range of the pressure transmitter.

**Electrical connection**

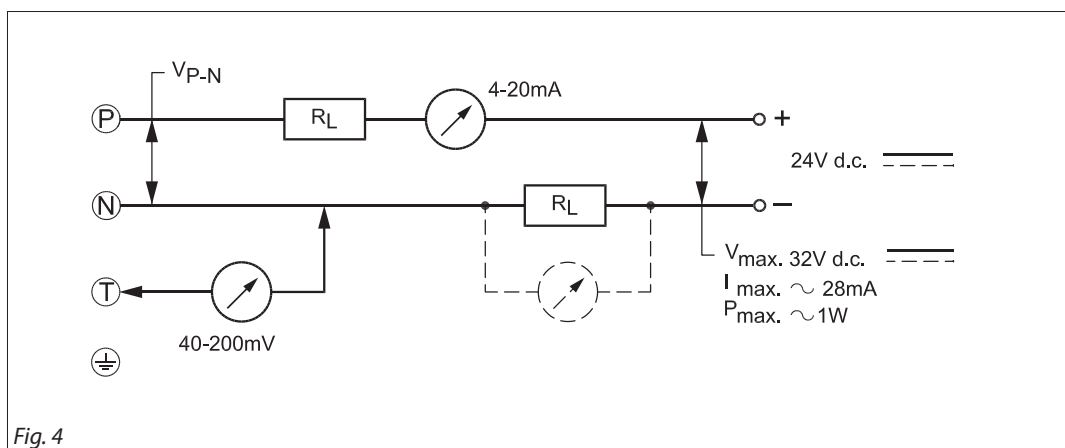

Fig. 4

The transmitter has a wiring diagram, see fig. 4. Terminals P (positive) and N (negative) are connection terminals for the supply voltage.

The same leads are used for supply voltage and output signal. A function test can be performed between terminals N and T without cutting off the current loop.

**Pulse snubber**

EMP 2 with the pressure range 0 – 6 bar and 0 – 10 bar at extended test pressure is provided with an integrated pulse snubber for protection of the sensor element against cavitations and air bubbles in the media due to extreme pressure peaks and pulsations. Such conditions may be caused by pumps or fast operation valves in both high and low pressure systems.

The integrated pulse snubber is designed as an 0.3 mm orifice mounted in the pressure connection. The medium should not contain particles which may clog up in the orifice. The viscosity has only little effect on the response time. Even at liquid viscosities up to 100 Cst the response time will not exceed 4 ms.

Dimensions and weight
